

1. This is the home page of Clothing Store application.

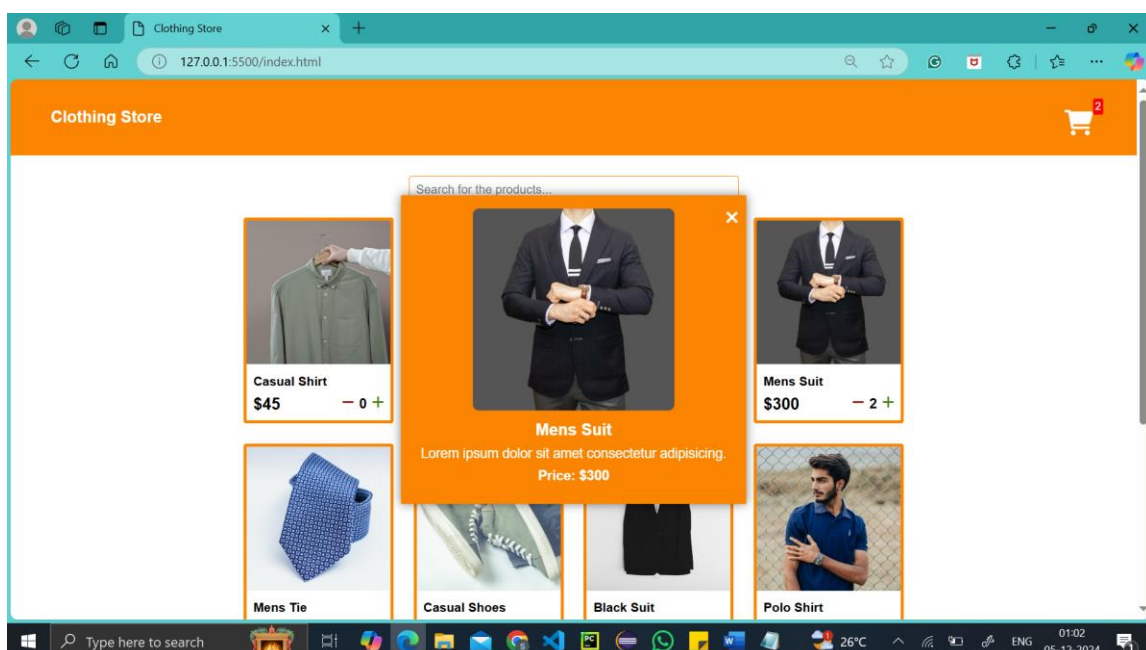

2. We can search for products and see the results instantly while doing the search.

3. When we click on the cart icon on the top-right, it will take us to the cart page. There all the items selected by the user will be listed. From this page we have 3 options to proceed further.
  - i. We can click on Checkout button and purchase the selected products.
  - ii. Clicking the Clear Cart button will make all the selected items go away.
  - iii. Any item from the list can be selected and reviewed. Like for example you can click on “Mens Suit” and a popup window will be opened on the Home Page describing the details of that product. You can close that window after reviewing and select more products based on your interest.

4. By clicking on items from the cart or on clicking the items from Home Page, will give us a popup window of that specific product with description. Here dummy information has been provided.

5. By clicking the Checkout button from scenario 3, we will be directed to the payment gateway page which is developed with the help of Stripe. It is a fintech platform that provides tools and APIs for handling financial transactions.

7. After clicking on Pay button from the above picture we are directed to the Payment Success page. From here we can be redirected to the home page.

8. In case the transaction gets failed, this is how we can see the payment cancelled page. By clicking on the Back to Shopping button we will be redirected to Home Page.

9. From previous scenario 3, by clicking on the Clear Cart button, this is how our UI will be displayed. By clicking the Back to Home button we will land on the Home Page. Even clicking on the Clothing Store from Navbar will take us to the Home Page.
